

## Weaverville Community Forest Becomes a Reality

The purpose of the Weaverville Community Forest is to invest the community with a sense of ownership and responsibility for land stewardship in the Weaverville basin. Through Stewardship Contracting, a new federal tool, the Bureau of Land Management and the Trinity County Resource Conservation District have built a partnership to manage 984 acres of federal land as a community forest, through a 10-year stewardship agreement.

Most of the Community Forest is located in the Weaverville Basin between Mill Street and Oregon Street, abutting residential areas like Timber Ridge. The District and Trinity Resource Conservation and Development Council invited people to a community forest visioning workshop in May 2004. High visual quality rose to the top of the list of goals in that meeting along with the shared vision of a forest that would be managed in a way that improves its fire safety and forest health, provides recreational and educational opportunities and produces merchantable timber to sustain the management of the Community Forest.

The District and BLM entered into the stewardship agreement last fall with all of these goals in mind. In May of this year the District invited everyone back to “check our vision”, as Pat Frost, the District Manager, put it and to look at the first phase of forest health thinning that was designed by Baldwin, Blomstrom, Wilkinson and Associates, professional foresters hired by the District. The reality of the Community Forest vision has been underscored with the sale and delivery of power line hazard trees to Trinity River Mill, putting the first money in the

Weaverville Community Forest Stewardship account. These funds, held by BLM, will be used by the District to implement other elements of the community forest plan – trails that link the Forest to the basin-wide trail system, erosion control projects that improve fisheries habitat in West Weaver Creek and noxious weed control.

The Weaverville Community Forest is getting attention far beyond Trinity County. Articles have appeared in the National Association of Conservation Districts Forestry Notes newsletter ([forestry.nacdnet.org/forestrynotes](http://forestry.nacdnet.org/forestrynotes)). Assemblymember Patty Berg cosponsored the nomination of the Weaverville Community Forest for the 2006 Governor's Environmental and Economic Leadership Awards. In her letter she stated, "Community participation has been the cornerstone of this grassroots project. Its success so far is due to the strong and long-standing landowner-to-landowner relationship between the TCRCDD and the wider community."

If you would like to know more about the Weaverville Community Forest visit the District's website at [www.tcrdd.net](http://www.tcrdd.net) where you can find, among other things, previous articles, notices of upcoming meetings and field trips.

# Financial Assistance Program for Trinity River Landowners

Trinity County will soon be accepting applications for the **Trinity River Potable Water and Sewage Disposal System Assistance Program (Assistance Program)**. This Assistance Program has been created to allow landowners to receive financial assistance to improve their potable water and/or sewage disposal systems required as a result of implementation of fishery restoration flows associated with the Trinity River Restoration Program (TRRP). The TRRP is implementing Lewiston Dam releases of up to 11,000 cubic-feet-per-second (cfs) based on water year type to improve physical fish habitat and to restore the geomorphic processes present in a healthy alluvial river. This is significantly higher than the 6,000 cfs maximum controlled releases that have been the normal dam operation for over the past 30 years.

The Assistance Program will provide financial assistance to relocate, replace, upgrade, modify or otherwise improve private potable water and sewage disposal systems. This program is limited to systems within the Trinity River floodplain between River Mile 111.8 (downstream of Lewiston Dam) and River Mile 72.6 (upstream of the confluence with the North Fork Trinity River).

This Assistance Program is being administered by Trinity County with funds provided by the United States through the TRRP. A total of approximately \$211,864 is currently available for reimbursement to qualified applicants under this program.

Applicants are limited to \$10,000.00 per each improved parcel for potable water systems and \$5,000.00 per each improved parcel for sewage disposal systems. Applicants may receive financial assistance only one time per system for capital improvements.

Applicants must obtain and fill out an application form available at the Trinity County Planning Department. Applications will be reviewed by Trinity County in cooperation with a designated representative of the United States. Applicants will be notified in writing by Trinity County as to their eligibility to participate in the program.

Applicants must comply with all local, state and federal permitting requirements for the work to be completed. In particular, the applicable Trinity County Building and Planning Department permits must be obtained and complied with. Applicants who do not comply with all permit requirements will not be eligible for financial assistance.

Information on the Assistance Program can be obtained from **Tom Stokely, Trinity County Planning Department**, at **530 623-1351 Ext. 3407**, or **Denise Wiltse, TRRP**, at **530 623-1803**.

# *Second Season of Summer Day Camp is Fun-filled Success*

The Weaverville Summer Day Camp has concluded another successful season at Lowden Park. The District ran 5 weekly sessions from June 26th to July 28th for children in the first through the fifth grades.

A total of fifty children attended one or more sessions and enjoyed various activities. The overall goal of the camp was to provide nutritional information, healthy snacks and fun physical activities to children empowering them to adopt healthy eating habits and physical activity patterns as a part of a healthy lifestyle and to learn about the natural world around them. The camp also gives the District the opportunity to provide summer jobs for local high school students. This year's counselors were Ashley Britton, Hannah Hammett, Heather Nawrock and Landis Taylor.

The camp was sponsored by the Trinity County Resource Conservation District and led by the District's Watershed Stewardship members, Jessie Oliver and Nancy Small. Camp received funding from the Shasta Cascade Regional Nutrition Network and the United States Environmental Protection Agency.

Many volunteers gave their time to teach their many skills to the children of the camp. We would like to thank them for their time and effort. The Trinity County Resource Conservation District looks forward to another successful camping year in 2007.

*Counselor Hannah Hammett shows campers how to bake in a solar oven.*

*Counselor Heather Nawrock and Jim Love talk with a camper at the Community Children's Garden.*

*Summer day campers enjoy a free lunch provided by the Trinity Union High School District.*

*Children enjoy making jewelry at the lapidary school in Lowden Park.*

*Counselor Ashley Britton and campers pick up trash in Lowden Park as part of a community service project.*

*Yoga Instructor Joel Donnelly shows campers a yoga pose.*

*Trinity County RCD District Manager Pat Frost is teaching campers how to identify a healthy stream by catching and identifying macroinvertebrates.*

**Trinity County Fair**  
on August 25 - 27

## Cut-Off Deadline Set for Landowners Applying for FY 2007 Environmental Quality Incentive Program Funds

Applications are now being accepted from agriculture producers wishing to participate in the Fiscal Year (FY) 2007 Environmental Quality Incentives Program (EQIP), a cost-share program offered by the Natural Resources Conservation Service (NRCS). Applications are available to all agricultural producers year round on a continuous basis; however, the application cut-off date for this year's ranking is November 30, 2006.

Agricultural landowners and operators interested in participating in EQIP can apply at their local USDA-NRCS service center.

During FY 2006, the Trinity County NRCS office obligated approximately \$300,000 in EQIP cost-share funds for a variety of conservation projects, and is expected to receive approximately the same amount for the FY 2007 program.

EQIP is a voluntary conservation program that assists producers on a cost-share basis to meet local, state, and federal regulations. EQIP funds help farmers and ranchers reduce soil erosion, improve water quality and forest health, conserve water and protect grazing land.

Through the EQIP program, farmers and ranchers can receive financial and technical assistance for conservation practices such as irrigation pipelines, sprinkler systems, water development fencing for livestock, forest stand improvement and fuels reduction.

Individuals who wish to participate in the EQIP program must meet all eligibility requirements, file a Commodity Credit Corporation (CCC) 1200 form, and fill out other forms necessary for program eligibility.

Applicants also need to have a completed conservation plan by November 30, 2006 in order to be considered for funding in FY 2007.

Landowners or tenants must have control of the property for the life of the contract period. The contract period can be from two to ten years in length.

The NRCS will evaluate each application and give highest priority to those applications that use cost-effective conservation practices; treat multiple resource concerns; address national, state, or local priorities; and provide the most environmental benefits. Once FY 2007 funds have been exhausted, interested applicants may, upon request, remain on file until additional funding becomes available.

For more information about EQIP, go to: <http://www.nrcs.usda.gov/programs/eqip>, or contact **Jim Spear, District Conservationist**, or **Tiffany Riess, Soil Conservationist** at the **USDA-NRCS Weaverville Service Center** located at **#3 Horseshoe Lane in Weaverville**. **Phone: (530) 623-3991**.

*EQIP funding of forest stand improvement results in improved forest health and reduction of forest fuels.*

## TRINITY RIVER WATERSHED GROUP ESTABLISHED

A Trinity River Watershed Group is being formed to address environmental issues that exist within the Trinity River watershed. The underlying principle of the group will be to coordinate existing programs and undertake a holistic approach to resource management that will focus on the overall ecological health and economic well being of the Trinity River system.

Initial formation has begun with members of public agencies, who have been working on resource related issues along the Trinity River for over 20 years. These partner agencies include Trinity County, Trinity River Restoration Program (TRRP), Natural Resource Conservation Service (NRCS) Bureau of Land Management, US Forest Service, and the RCD. Others to be included are private landowners, commercial timber operators, local community service districts and other state and federal agencies.

In the last couple of months, the watershed group has drafted a preliminary mission statement that will provide guidance for the work to be accomplished within the watershed. The goal will be to develop management objectives that complement the TRRP program, but that go beyond the scope of restoration of the naturally-spawning populations of salmon and steelhead in the mainstem of the Trinity River. It is envisioned that this watershed group will evaluate the natural processes that occur in the upslope areas of the mainstem Trinity and address the concerns of landowners and land managers in the tributaries of the watershed.

The group is currently developing a Memorandum of Understanding (MOU) for the purpose of defining the roles and responsibilities of each of the entities involved. The MOU will focus on a commitment to cooperation and common interest in gathering and sharing information, project development and implementation, and public education. One of the first objectives will be to combine existing data and reports to provide an updated assessment of the watershed conditions.

The Trinity River Watershed group would like the input, ideas and participation from the general public for projects that will contribute to the restoration of the watershed. For information on the watershed group's next meeting (Sept. 26) or to get on the mailing list, contact the District at 623-6004 or email us at [info@trcrd.net](mailto:info@trcrd.net).

### District Manager's Corner *Pat Frost*

Earlier this summer the District's Board of Directors adopted an update to its Strategic Plan. This gave me the opportunity to think about some broad themes to help light our path as we move forward. Our quarterly Conservation Almanac also is a tool.

I use the articles in the newsletter to measure how we are doing right now to meet those long range goals in the Strategic Plan and, more importantly, how we are meeting the needs of all of you. This issue is about community needs – issues that you have brought to the District and asked for help. The District got involved in the Weaverville Community Forest at the request of residents in the community and BLM back in 2003. Today our community, through the Community Forest, is being used around the country as an example of locally led land management and stewardship on federal lands. Landowners along the Trinity River and on streams up and down its length call on us. Sometimes they just have a quick question that we can answer, but sometimes they have bigger concerns about their stream or their land. That has been especially true this year – a very wet year. The newly forming Trinity River Watershed "Council" is an effort to provide a forum for exchanging information, sharing concerns and offering solutions to landowners throughout the watershed.

We have just completed our second year of our very successful Summer Day Camp. The District took up the summer camp program last year, because a number of parents mentioned to us that they really needed some organized programs for their children during the summer. We scratched our heads, thought about it and came up with the idea of a camp that gave children outdoors and nature-based activities. Attendance this summer is double that of last year, but the true sign of success has been the smiling, laughing faces of children finding tree frogs on the banks of East Weaver Creek and seeing them run to the Children's Garden to be the first ones to get dirt under their fingernails. See the photo-essay in the center of the newsletter for a sample of the fun activities the children took part in.

## Trinity River Factoids

### *Did you know...*

**The Trinity River runs for 172 river miles from the mainstem headwaters to the confluence with the Klamath River at Weitchpec. The first 60 river miles lie above Lewiston Dam.**

**The highest point in the Trinity River watershed is Mount Eddy at 9025 feet. Mt. Eddy is named for Olive Paddock Eddy, the first woman to climb Mt. Shasta.**

**Construction of Trinity and Lewiston Dams/Reservoirs was completed in 1963, although flows and sediment transport were affected by the projects as early as 1961.**

**The area above the Trinity Dam, often referred to as the Upper Trinity, is 443,138 acres and its largest tributary is Coffee Creek at 74,476 acres. The largest tributary to the Trinity River below the dam before the confluence with the South Fork is the North Fork Trinity. It drains an area of 67,222 acres.**
